### **DETAILED ACTION**

## Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* **v.** *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Sjoo in view of Karlsson etal.

Sjoo discloses all of the subject matter as set forth in the claims and is identical to the invention as broadly recited. Claimed elements clearly disclosed by the reference are: a first part (3), a second part (2), a clamping member (5), male and female mating sections (12, 16) comprising axially irregular surface profiles defined by portions extending to axially different extents and a cutting insert (edge) mounted on the first part which is not numbered. Sjoo lacks the disclosure of the male and the female members being oriented on the interacting surfaces such that the male and female members

Art Unit: 3724

intercouple only in a single position and the orientation of the male and female members prevents the male and female members from intercoupling in another position. Karlsson et al. discloses such an arrangement. It would have been obvious to a skilled artisan at the time of the invention to provide Sjoo with configuration of male and female members as taught by Karlsson et al. in order to preclude the male and female members from intercoupling in another position. It is clear that only one unique single position exits for this arrangement as modified due to the unique shape of the cooperating mating surfaces.

# **Response to Arguments**

Applicant's arguments filed 8/21/07 have been fully considered but they are moot in view of the new grounds of rejection.

#### Karlsson et .al disclose:

Then the lips 30A, 30B of the tool tip are brought by hand into contact with the grooves of the front surface 24. During subsequent rotation of the nut, the tool tip 10 will be firmly drawn rearwardly against the front surface 24, i.e., the position according to FIG. 1 has been achieved. In this position the end surface 16 of the tool tip will not abut against the front surface 24 since the gap L3 is provided therebetween. The gap is L3 is of the magnitude of 0.01 to 0.1 mm for avoiding tilting of the tool tip relative to the tool body. The tool tip 10 is now anchored in the drill body 12 in a satisfactory manner.

### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Willmon Fridie whose telephone number is 571 272 4476. The examiner can normally be reached on Monday - Thursday.

Application/Control Number: 10/609,489 Page 4

Art Unit: 3724

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, ASHLEY BOYER can be reached on 571 272 4502. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
